Abstract (en)
[origin: EP0586981A1] The mutually articulated links constituting the watch strap (bracelet) comprise a reinforcement (fitting) (2) produced in machinable metal and equipped with a hinge (14) sandwiched between two protective pieces (4, 6). The protective pieces are held in place by at least one stud (10) integral with one of the protective pieces (6) and extending through holes (12, 13) made, respectively, in the reinforcement (2) and in the other protective piece (4), the stud (10) being retained in these holes by a riveted joint (seam) in its distal end (10a). Two lateral parts (8) of one of the protective pieces (6) extend opposite the lateral faces of the link. <IMAGE>
