Abstract (en)

[origin: EP0586989A1] An upper nozzle link (55) a lower nozzle link (58) are independently connected to the discharge side of a pump (95) so that wash water to the upper nozzle link (55) and wash water to the lower nozzle link (58) can be separately supplied. In addition, pressure applied to the wash water by the pump (95) when the wash water is supplied to the lower nozzle link (58) is set to a relatively highpressure. Accordingly, a person to be hair-washed can clearly feel that its nape portion is washed because only its nape portion is washed at high water pressure, so that it is possible to obtain a satisfactory feeling of washing. <IMAGE>
