Abstract (en)
[origin: EP0587241A1] Conveying appliance which forms part of a conveying system for separate flat objects, such as letters, in which successive objects are each conveyed at a separately variable speed. Said separately variable speed is possible owing to the fact that for each of the objects to be conveyed through the appliance there is present a conveying element (T1, T2, T3). The appliance further comprises means for selectively carrying an object along using a chosen conveying element. <IMAGE>
