Abstract (en)

[origin: EP0587464A1] Device which makes it possible to feed a pumping unit with a multiphase fluid comprising at least one liquid phase and one gaseous phase. The device consists of a storage vessel including means for withdrawing the fluid, at least two in number, which are extended in the storage vessel so as to pass through the liquid-gas interface in normal operation, the said means of withdrawal include withdrawal openings distributed on both sides of the said interface in normal operation, the means of withdrawal being connected to the pump unit. <IMAGE>
