Abstract (en)

[origin: EP0587467A1] Electrostatic spraying device having an insulated coating-product container, of lightweight and compact structure. The container (13) mounted on a metal base (24) is defined in a body (22) made of insulating material and a piston (14) located in this container is actuated by a fluid delivered into an actuation chamber (32). According to the invention, a section (54) of the circuit for supplying this fluid is arranged so as to be parallel to the cavity of the container away from the base starting from the end (bottom) wall of the actuation chamber.
