Abstract (en)
[origin: EP0587484A1] Device for analysing information supports, particularly game forms (slips) or receipts, comprising means (2, 4) for introducing the support (3), means (1) for reading the information located on the support, means (5) for processing the information read on the support with a view to converting it into numerical data and transmitting it to a central management unit of the games, characterised in that the means (1) for reading the information located on the support comprise an optical reader which is blind to at least one colour in which fixed information is printed on the form and sensitive to other colours, so as to take account only of the variable game information (27) and the fixed information (23, 24, 25) framing the form and designating the type of game to which it belongs, which are printed in these other colours. <IMAGE>
