Abstract (en)

The device has a plurality of support bars which can be spread apart radially from a central head part (2) and a plurality of shielding surface elements (17, 18) which are attached in each case between two support bars. The multi-part design of the support bars from bar elements (4, 5), which engage in one another in a longitudinally displaceable manner, permits surface elements (17, 18) to slide over one another so that the device can have different sizes of the protective surface during use, starting from a compact, pushed-together and collapsed form. The shielding can be adjusted individually by sliding limitedly transparent surface elements over one another. <IMAGE>

Abstract (de)

Die Vorrichtung hat mehrere strahlenförmig von einem zentralen Kopfteil (2) wegspreizbare Tragstäbe und mehrere abschirmende Flächenelemente (17, 18), die jeweils zwischen zwei Tragstäben befestigt sind. Die mehrteilige Ausführung der Tragstäbe aus längsverschiebbar ineinandergreifenden Stabelementen (4,5) gestattet das Uebereinanderschieben von Flächenelementen (17,18), so dass die Vorrichtung in Gebrauch, ausgehend von einer kompakten, zusammengeschobenen und zusammengeklappten Form, verschiedene Größen der Abschirmfläche aufweisen kann. Durch Uebereinanderschieben von begrenzt lichtdurchlässigen Flächenelementen kann die Abschirmung individuell eingestellt werden. <IMAGE>
