Abstract (en)

A high-frequency constant-current feeding system for supplying electric power from a high-frequency constant-current power supply to loads by using current transformers includes a high-frequency constant-current power supply and a plurality of current transformers each having a primary and secondary windings. A load is connected to the secondary winding of each current transformer, and the primary windings of all of the current transformers are serially connected to the high-frequency constant-current power supply. <IMAGE>
