Abstract (en)

[origin: EP0588133A1] A method for mixing media by rotation, the media having different specific gravity and being charged into a longitudinal closed vessel (11) in such a way that a sufficiently large empty space remains for mixing the samples, permits a gentle and thorough mixing of the media if one or more vessels rotate at intervals about an axis of rotation with their lower vessel ends on a smaller radius (12) than their upper vessel ends.
