Abstract (en)
[origin: EP0588187A2] A wall for fairs and shops exhibits two profile struts (2) which run parallel to, and at a distance from, one another and contain, in their narrow longitudinal sides, grooves (13) behind which it is possible to engage. Hooked in the lower profile strut are at least two carrying members (17) on which one wall panel (3) stands. The wall panel (3) is prevented from tilting by an upper retaining member (18). Both the carrying member (17) and the retaining member (18) have, with respect to the cross-section, a U-shaped configuration, formed in each case from a rear part and two legs extending from the rear part. One of the legs is plugged into the groove (13), behind which it is possible to engage, of the relevant profile strut (2), whereas the other leg engages in a groove (16) of the wall panel (3). <IMAGE>
