Abstract (en)

[origin: EP0588207A2] A dress-hanger, particularly meant for a diving outfit, such as a diving suit and diving outfit pieces, which comprises at least one supporting element or jacket-carrying element (1) consisting of two arms (1', 1''), and which in the median top portion thereof is formed with an intermediately located dress-hanger-suspending hook member (2), the said arms (1', 1'') extending outwardly from both side ends of the dress-hanger hook member (2). The jacket-carrying element (1) has both of its arms (1', 1'') provided with an overlying jacket-bearing member, whereby any deformation is avoided of the parts resting thereon of a jacket or a diving suit. This jacket-bearing member consists of two parts (5, 5') which are transversely enlarged relative to the longitudinal extent of the jacket-carrying element (1), and have an upwardly roundish cross-sectional shape. These parts (5, 5') are so formed that also a sleeveless jacket can be borne by its shoulders thereby. The dress-hanger is also formed with a lower supporting element, or trousers-carrying bar (3). Further immovable or removable means (14, 8, 11), meant for carrying pieces of a diving outfit, such as annular seals, pressure-reducing valves (R) of air-delivery devices for air-breathing apparatus, hanger members, are provided in the dress-hanger according to the invention. <IMAGE>
