Abstract (en)

[origin: EP0588248A2] The invention relates to a lock, in particular a mortise lock, for doors or the like, with a latch which projects on the fore-end side and can be actuated by a handle spindle and which can also be retracted by means of a handle (4) of a magnetic-card lock (5), and proposes, in order to achieve a solution advantageous especially in terms of construction, that the latch (23) advanceable into a bolt-exit position be blockable against opening by means of an additional follower (31) as a result of the part rotation of the follower (9) actuatable by the handle spindle. <IMAGE>
