Abstract (en)

The invention relates to a steam and gas turbine installation for generating electricity and/or heat from natural gas, comprising: i) a combustion unit for combusting a mixture of moistened natural gas and air, and provided with a flue gas duct which ends in a chimney, to which flue gas duct are connected for heat exchanging; ii) a heating unit (6) for heating high pressure steam respectively medium pressure steam; iii) an evaporator unit (7) for forming high pressure steam; iv) an economizer unit; v) a degassing unit (9) for degassing condensate; vi) turbines for generating electricity with steam; and vii) a moistening unit (10) for moistening natural gas for supplying to the combustion unit, wherein an independent steam unit for high pressure and/or low pressure steam is preferably present. <IMAGE>
