Abstract (en)

[origin: WO9222431A1] System for obtaining forms (57) for telegrams or for cabled money orders from a continuous form (55) with continuous longitudinal perforated lines (63-65) prepared for easy detachment (70-73), divided by transversal lines (75-77) prepared for easy detachment, in three zones (A, B, C) of equal width, the first (A) for the consignee's address (101) and receipt (103) and the others (B, C) for the written message, it being possible to use said form (57) as an envelope by folding inwards the second zone (B) over the third zone (C) and folding outwards the first zone (A) over the second zone (B), closure of the envelope being ensured by glued areas (80-85) that react by mutual contact, it being possible by means of a longitudinal intermediate perforated line (64) to obtain a second form (58) to be used by the Post Office for filing purposes and containing the essential data of a cabled money order.
