Abstract (en)
[origin: EP0589292A1] A formwork angle for floors has a formwork wall comprising a multilayer lightweight construction board with an insulation board (4) which is located between the outer and the inner formwork board (2, 3). At right-angles to the formwork wall, a support board (5) is arranged which, via an adhesive layer, is connected to at least the lower end faces of the formwork boards (2, 3). Over the length of the formwork angle, an interlayer of at least two different adhesives (S, L) is applied, at least one adhesive (S) being a rapidly hardening adhesive and the other adhesive (L) being a slowly hardening adhesive. <IMAGE>
