Abstract (en)

[origin: EP0590362A1] A special control cam arrangement for controlling the pump pistons of an injection pump of a 4-stroke internal combustion engine, especially a diesel engine, is created, which is characterised in that the control cam(s) (17) and the associated base circle(s) (20) are provided on the crankshaft (4) of the internal combustion engine and that a pump is used as injection pump (11), the delivery of which is controlled by solenoid valves (18 and 22, 23 and 24, 25, 26). This produces a series of advantages such as reduced engine manufacturing costs, higher rates of delivery, excitation of less torsional vibration and noise, and lower Hertzian stresses. <IMAGE>
