Abstract (en)

[origin: EP0590437A1] An apparatus for filling bags 18 especially with sand has a funnel-shaped feed container 1 for the filling material. Located in the bottom of this feed container 1 is a conveyor worm 2 which is driven by an electric motor 4 and which opens out in a filling connection 6 of the feed container 1. This filling connection 6 is angled vertically downwards and, in its push-on region, has a switch 9, 9' which can be actuated when the bag 18 is pushed on and which at the same time sets the electric motor 4 for the conveyor worm 2 in operation and stops the electric motor 4 again when the bag 18 is drawn off. <IMAGE>
