Abstract (en)  
The object of the invention is a water tap combination comprising, as separate pieces, a water tap portion (30) and an installation fitting (10). The installation fitting which is installed inside a wall comprises supporting members (11,15) which have adapters (12,12') fitted into cold and hot water input conduits, check valves (13,13') for cold and hot water, two discharge openings (14,14') for outflowing water, a channel (15) which connects the mixing space and the discharge openings (14,14') of outflowing water, two openings (18,18') in the vicinity of either discharge opening (14,14') which can be connected in a sealed manner to respective openings (16,16') of the water tap portion (30). The water tap portion is attached to the installation fitting using attachment members (17). The installation fitting can be adapted to numerous water tap solutions depending on whether both discharge openings (14,14') are kept closed, open, or one of them open and the other one closed, and whether the channel (15) is kept open or closed. <IMAGE>
