Abstract (en)

A device for detecting in advance the height of locking latches in installations for changing the gage constituted by a frame (9) composed of four supports (12) holding, at a certain height, detectors acting on a semaphoric signaling, the frame being joined, by means of tie rods, to a holding plate supporting resilient stops, and fixed to said resilient stops there are supports for polyamide wheels, the task of which is to take as reference the lower part of the vehicle bogie and to hold microswitches at an adequate distance. <IMAGE>
