Abstract (en)  
[origin: EP0591909A1] A shoe is described, in particular for diabetics or rheumatics. The shoe has a footbed, a covering layer on the footbed, a cushion region arranged in the footbed, in particular in the central foot, heel and/or toe region, and a midsole. The cushion region has a multilayer structure and has an upper soft layer, a central hard layer and a lower semi-hard layer. As a result, pressure and/or shear stresses of the foot can be reduced to a great extent. A correspondingly designed insert is also described. <IMAGE>
