Abstract (en)

[origin: EP0592299A1] Reclosing method and device for a flexible package or packaging bag enclosing, in an envelope (e), a relatively rigid product (b) which can, preferably, be extracted from it in fractions, whilst retaining a relatively stable geometric shape in the filled section of the said envelope. The emptied section of the envelope (e) is trapped by crumpling and/or folding it over itself in a relatively rigid lid whose shape and size are paired with those of the section which has remained full and over which the said lid is fitted in order to cap it and close it. <IMAGE>
