Abstract (en)

[origin: EP0592387A1] System for regulating a transverse suspension between bogie and coach body of a railway vehicle, comprising at least two spring elements which act in the transverse direction, are based on fluid pressure and are provided with controllable valves for adjusting the pressure of their operating medium, by means of a displacement measuring system (8, 8') for the deflection in the transverse direction between bogie (2) and coach body (1), which displacement measuring system (8, 8') is connected to a control unit (12) which actuates at least the control valve (5, 5', 6, 6') associated with the compressed spring element (3, 3', 4, 4') in accordance with a predetermined function for each value, detected by the displacement measuring system (8), of the deflection of the coach body (1) with respect to the bogie (2). <IMAGE>
