Abstract (en)
[origin: WO9323711A1] A damper device, especially for flow regulation of ventilation arrangements, comprises a flow conducting casing (1) and a damper element (2) turnably arranged in the casing, which element is mounted on a detachable clean-out door (3). The clean-out door is turnably arranged in relation to the casing (1) and the damper element is connected to the clean-out door to accompany the turning of the latter.
