Abstract (en)

A dryer for sliced or peeled sheets of wood and the like, characterised in that it includes two or more superimposed or superimposable rigid plates (5), the facing and opposing surfaces of which are substantially flat; spacer means (6) interposed or interposable between the plates so as to define between facing surfaces of the plates at least one interspace (7) of uniform height for receiving the sheets of wood (A) to be dried, a heat source (8) for supplying the plates with the thermal energy necessary to dry the wood; the height of the spacer means being just sufficient to prevent the plates from squashing the wood while allowing the sheets of wood to shrink freely in their own planes, parallel to the faces of the plates, as a result of the drying. <IMAGE>
