Abstract (en)
[origin: EP0592755A1] In a hydraulic unit with a cylinder (1) which is arranged axially displaceably on a fixed piston rod (2) on both sides, the pressure medium lines (10,11), which connect working spaces (8,9), which lie on both sides of the piston (1) in the cylinder (3), to feed ports and discharge ports (12,13) for hydraulic medium, run together on one side in the same piston rod side (14). In this way, the necessity of laying free connecting lines is dispensed with whilst the lines for the hydraulic medium are made shorter overall. <IMAGE>
