Abstract (en)

[origin: EP0592807A1] The object is to provide a device which makes it possible to extract a loom warp-changing system of the cassette type out of the drawing-in machine, temporarily to store the latter intermediately and to have it taken over from the intermediate storage by a transport means for insertion into the loom. For this purpose, a transport trolley (4) is equipped in such a way that, after the warp threads (9) have been drawn into the warp-changing system by means of the drawing-in machine, the transport trolley (4) can be connected to a carrier device (12) receiving the warp-changing system in a loom-adapted way in the manner of a cassette, and the warp-changing system is temporarily stored intermediately on the transport trolley (4) and is received from the intermediate storage by a warp-beam lifting carriage (14) known per se and is inserted into the loom.
