Abstract (en)

[origin: EP0592857A2] The invention relates to a device for trouble-free transporting (conveying) of products in folding machines, and through a gap between two product-guiding cylinders and through a cylinder interstice which extends behind said cylinders and is delimited by circumferential surfaces of both cylinders and upwardly by a guide device for the product to be transported. The device is characterised in that a cylinder (1) receiving a product (6) has applied to it a coating (10) which has a multiplicity of chambers (11) which can be closed by a section of the product (6).
