Abstract (en)

[origin: EP0592957A1] An apparatus for directing wood laminates, in particular parquet laminates produced by chipless separation from a squared timber, has an alternate-bending section (2) through which the wood laminates (1) pass in the longitudinal direction. During this, the heated wood laminates (1) are subjected to alternate-bending operations. In a downstream pressing section (3), the wood laminates (1) can be pressed between plane surfaces and further cooled. <IMAGE>
