Abstract (en)  
A refrigerated display unit has a base (12) and a storage compartment (29) located above the base. Access to the storage compartment is gained via a front access opening. The unit is provided with a cooled air circulation system comprising a fan (14) and cooling means (16). Relatively warm air is drawn into the base (12) via an inlet opening (50) by means of the fan (14). The air is then cooled by the cooling means (16) and forced up a duct (22) behind the interior rear walls (17a to 17e) and roof (26). The rear walls (17a to 17e) and/or the ceiling (26) are provided with a plurality of apertures, through which substantially all of the cooled air is discharged into the storage compartment (29) of the unit. <IMAGE>
