Abstract (en)
[origin: US5143992A] An improved thermoset polymer having good mechanical properties and no detectable dicyclopentadiene odor is obtained by the ring-opening polymerization of a novel mixture of adducts comprising divinyl cyclohydrocarbon compound, such as 3,5-divinylcyclopentene and cyclopentadiene, optionally with added cycloolefinic compound, such as dicyclopentadiene, at polymerization conditions in the presence of an olefin metathesis catalyst.
