Abstract (en)

[origin: EP0593981A2] An electric connector (1) comprises a U-shaped catch spring (28) which can be released by means of a button (10) for interlocking with a mating connector (7). To be able to make the catch spring (28) in such a way that it is of a simple and strong design, it is positively connected to the button (10), and the interlocking sections (34) of the catch spring (28) are guided displaceably in the housing (2), so that a releasing of the catch engagement is possible without spreading or otherwise bending the catch spring (28). <IMAGE>
