Abstract (en)

[origin: US5425211A] The invention relates to a wall component for forming a building wall. In order to provide an easily handlable wall component and a wall formed from a plurality of such wall components, which can be rapidly erected and makes it possible to have a desired wall course, the wall component is formed by two vertical, parallel wall panels made from wood or a wooden material, which are kept spaced by web plates. The wall panels are provided on their top, bottom and end faces with connecting elements for engaging with corresponding connecting elements of adjacent wall components. Preferably the connecting elements are formed by grooves and tongues.
