Abstract (en)

The high-efficiency device for vapor production comprises a boiler (2) which is provided with a means (3) for heating a preset amount of water to form steam, with a means (4) for controlling the forming of steam and with a means (5) for the controlled dispensing of steam, by means of flexible hoses (7), to the body of the iron (6); the boiler is connected to a means (8) for storing water and steam to replenish water and steam in the boiler in proportion to their consumption by the iron. <IMAGE>
