Abstract (en)

[origin: EP0595416A1] In the first embodiment, direction arrows that point to subsequent direction arrows that are on the same fiber are concatenated so that any error can be smoothed over a longer motion. In the second embodiment, the orientation, location and time when the vehicle should be given a new setpoint is determined. In the third embodiment, it is determined whether the vehicle on the desired path, and the motion is corrected if it is not. <IMAGE> <IMAGE>
