Abstract (en)

[origin: EP0595444A1] The invention is intended to provide a space-saving accommodation which terminates the outer wall of the wagon as well as permitting reliable transportation and simple and rational loading and unloading of the containers. According to the invention, the containers (1) are fitted with their end walls (2) to the outer contour of the side wall (3) of the wagon. Additional sealing elements (8), fixing devices and locking devices (6) form a homogeneous outer surface which has favourable effects on the flow-dynamic behaviour and on the transmission of solid-borne sound, which is particularly required at high speeds. <IMAGE>
