Abstract (en)
Vapour recovery apparatus particularly applicable to a fuel dispenser (10) for fuelling motor vehicles comprises a vapour pump (36) for returning vapour from a nozzle (15) to fuel storage tank (12). Inlet and outlet pressure transducers (38, 40) on vapour pump (36) provide signals to a controller (50) from which the actual vapour flow rate through the vapour pump (36) is determined. <IMAGE>
