Abstract (en)

[origin: EP0595718A1] The invention relates to a valve for a heating installation or hot water installation comprising a valve body (2) and a controlled internal obturator (4), characterised in that the valve body (2) comprises at least one cylindrical portion equipped with at least one orifice (5) and in that the cylindrical portion comprises a connection sleeve (6) surrounding the cylindrical portion (3) and defining a circulation chamber (7). The invention also relates to a hot water installation or central heating installation and to a radiator having such a valve. <IMAGE>
