Abstract (en)
[origin: WO9324376A1] Described is a closure, made of thermoplastic material, for a container (1) for the handling and storage of fluids, the closure comprising an essentially tubular pourer (3) and a closure element (5) which seals the pourer opening. The pourer and the closure element both have a coating film (12, 19) intended to protect the contents. Such films may be designed to protect the contents against the action of oxygen, for instance.
