Abstract (en)

The umbrella is composed by a cylindrical part (1) having in continuing a flared part (2) which comes to form in opening the support for the frame of the covering (16) while in closing it permits the containment of the same covering into the said cylindrical part (1). Said re-entering of the covering (16) is permitted by a system of levers with ribs (14 and 15) which during no use letting down the knob (8) in central conversion come to re-enter into the cylindrical part (1) while for the umbrella opening, pushed the push-button (22) it is disarmed the hook (9) permitting by a spring (20) the rising for sliding of all the system of levers with ribs (14 and 15) which brings the lenght of material (16) in opening. <IMAGE>
