Abstract (en)  
[origin: EP0596263A1] The oven has a heating device and a control device which controls it, by means of which it is possible in a heating-up phase for the purpose of heating up the oven to switch on the full heating power and, as a function of the selected desired temperature, automatically to switch on a continued heating phase at reduced heating power. In accordance with the invention, when the desired temperature is reached, a partial heating power is switched off and a switchover is made to continued heating operation. The partial heating operation is assigned a separate display element which is automatically switched off simultaneously with the switchover to continued heating operation. <IMAGE>
