Abstract (en)

[origin: EP0596343A1] A method is proposed for inputting characteristic data into the microprocessor of a motor vehicle key (3), equipped with a transmitter, for wireless transmission of encoded function commands to the receiver of a control device for the central locking and anti-theft protection systems of a motor vehicle, which method is distinguished by the fact that the characteristic data generated by a characteristic data generator (1) in accordance with a specific algorithm using a pseudo-random generator are firstly fed into a characteristic data programming device (2) and passed on therefrom to the motor vehicle key (3). <IMAGE>
