Abstract (en)
[origin: EP0596427A1] A lamp (5) for a vehicle headlight, comprising a bulb, a socket and a flange disposed between the bulb and the socket, and provided with axial centring pins, is carried by a device (12) in which a cup (13) which may be housed securely in a collar of a reflector of the headlight is joined by means of a bayonet connection (15) to a frame (14) which receives internally the socket of the lamp and has, on the side nearest the cup, a plate (20) through an aperture in which the lamp bulb is made to pass, a first face (26) of the plate, facing the cup, being completely flat; the frame carries an elastic fork-shaped element (16) which is hinged transversely to the socket and in one of whose operating positions the prongs (56) of the said element elastically secure the flange (8) of the lamp against a second face (27) of the plate, which is opposite the first, and is provided with recesses (28) to receive the axial pins of the flange. <IMAGE>
