Abstract (en)

In order to enable the wedges (35, 36) which fix a pane of glass (2) in a window (1) to be positioned quickly and precisely, the invention provides a connecting fitment (26) with a right-angled body defined by two limbs (28, 29) at right angles to each other. From at least one of these latter projects at least one support plate (30, 31) part of which constitutes the wedge for the window. <IMAGE>
