Abstract (en)
[origin: EP0596570A1] A carding-cementing machine for shoes comprises a pair of supports (12, 13), each supporting one shoe (14, 15) to be worked. Two working heads (18, 26) are disposed above said supports (12, 13), the first one (18) comprising a carding tool (54) and the second one (26) comprising a cement-delivering tool (56). The supports (12, 13) and the working heads (18, 19) are mutually movable so that the carding tool (54) can travel over a predetermined path on the bottom of a shoe (14) disposed on the first support (12), while the cementing tool (56) can travel over a predetermined path on the bottom of a second shoe (15) disposed on the second support (13). In addition, the mutual positions between the supports (12, 13) and the working heads (18, 26) can be interchanged with each other so as to enable the carding tool (54) to travel over a predetermined path on the bottom of a shoe disposed on the second support (13) while the cementing tool (56) is traveling over a predetermined path on the bottom of another shoe disposed on the first support (12). <IMAGE>
