Abstract (en)
[origin: EP0596577A1] The invention relates to an installation for making products of wire-shaped material (11), comprising a mechanism (1) for intermittently supplying the wire material (11), a mechanism (2) for reducing the diameter of the wire material (11) and a press mechanism (4) to form wire material pieces in the desired shape, a cutting mechanism (3) for the wire material pieces forming a part thereof. According to the invention the supply mechanism (1) of the wire material (11) is formed by a supply device incorporated in the press mechanism, said supply device also being provided with a wire drawing mechanism (2) forming one unit therewith, one and other such that the supply mechanism (1), the wire drawing mechanism (2), the cutting mechanism (3) and the press mechanism (4) are all combined into one single machine. <IMAGE>
