Abstract (en)

This double eaves course (eaves covering) element particularly relates to roofing made of tiles or slate. It is in the form of a prefabricated shaped element (1) of finite or undefined length, and capable of being located in the extension of similar elements. The lower face of the element (1), forming an obtuse angle, is applied and fixed to a roof framework (9, 10) and/or an entablure (12). Its upper face is designed to retain at least one row of roofing elements, such as tiles (2). Such an eaves course element (1) affords a significant saving in time by comparison with the laying of conventional double eaves courses, whilst constituting an effective reinforcement. <IMAGE>

Abstract (fr)

Cet élément de doublis concerne notamment les couvertures en tuiles ou en ardoises. Il se présente comme un élément profilé (1) préfabriqué, de longueur finie ou indéfinie, et pouvant être disposé dans le prolongement d'éléments similaires. La face inférieure de l'élément (1), formant un angle obtus, est appliquée et fixée sur une charpente de toit (9,10) et/ou un entablement (12). Sa face supérieure est conçue pour la retenue d'au moins une rangée d'éléments de couverture, tels que tuiles (2). Un tel élément de doublis (1) apporte un gain de temps considérable, par rapport à la pose d'un doublis traditionnel, tout en constituant un renfort efficace. <IMAGE>
