Abstract (en)

[origin: EP0597179A1] A method for processing a silver halide color photographic material. The method comprises steps of developing a silver halide color photographic light-sensitive with a color developer, and bleach-fixing said light-sensitive material with a bleach-fixer, in which a silver halide emulsion layer of the light-sensitive material comprises silver halide grains having a silver chloride content of not less than 80 mol %, the color developer contains a specified hydroxyl amine derivative or a monosaccharide and the bleach-fixer contains a specified ferric complex salt of aminopolycarboxylic acid and a specified aliphatic dibasic acid.
