Abstract (en)
[origin: EP0597398A1] In the permeable structure, which is constructed from cards, continuous ducts are arranged in rows and flow compartments are formed between the rows of ducts. Said compartments are bounded on opposite sides by cover plates. At least two transverse webs (6) are arranged one behind the other at the same level in the flow compartments (4). The transverse webs (6) are of different length (B) in at least half of the cards, and the ducts (1) extend essentially at right angles to the flow compartments (4). <IMAGE>
