Abstract (en)

A dynamic flow washing machine in which the fill water is preliminarily heated and then recirculated in order effectively to extract detergent from a first compartment (1) of a detergent container (21) during the course of a first washing stage, and from a second compartment (2) of the detergent container (21) during a second washing stage, without intermediate emptying of wash liquid, in such a way as to restore the effective concentration of detergent during washing without dispersion of the washing liquid and its heat content and with more effective use of detergent. <IMAGE>
