Abstract (en)

[origin: EP0598173A2] In a device for fixing fittings to pipes, having two stop plates movable relative to one another, the invention proposes to provide a spindle drive for the movement of at least one of the stop plates. In this way, a light, inexpensive and operationally reliable construction is created, which can be operated with low handling forces and is operationally reliable since it has no hydraulic or pneumatic lines which may leak. Furthermore, a device of this type is suitable for attaching electric drives, in particular for coupling already existing electric tools, such as a drill or a cordless screwdriver. <IMAGE>
